

IRON COUNTY MOSQUITO ABATEMENT

Public Information Notice

Iron County, through the Iron County Noxious Weed Department, provides mosquito abatement services to help reduce mosquito populations and the risk of mosquito-borne disease.

Mosquito Treatment

Mosquito treatments are conducted as needed based on mosquito activity, surveillance, reported concerns, weather conditions, and other factors affecting mosquito populations.

When mosquito treatments are necessary, applications are generally conducted during the evening hours, after approximately **9:00 p.m. and into the overnight hours**, when conditions are appropriate for treatment.

Treatment timing may change due to weather, wind, temperature, mosquito activity, or other conditions.

Request Mosquito Treatment

Residents may submit a request for mosquito treatment through the Iron County Noxious Weed Department's online mosquito abatement request form.

Treatment requests will be reviewed by the Department and addressed based on mosquito activity, conditions, and available resources.

Request No Treatment

Residents who do not want mosquito treatment on their property may also submit a **No-Treatment Request** through the online request form.

The County will document these requests and, when possible, consider reasonable requests regarding treatment of a property. Residents requesting no treatment should understand that mosquito control activities may occur in surrounding areas and that the County cannot guarantee that mosquitoes will not enter or be present on a property.

Treatment Information and Records

Iron County maintains records of mosquito abatement activities, including treatment locations and other relevant application information.

Residents may contact the Iron County Noxious Weed Department with questions regarding mosquito abatement activities or submitted treatment requests.
